activity and polynucleotides encoding them. The polynucleotides, proteins, antibodies, agonists and antagonists of the proteins are useful for drug screening, clinical trial monitoring, and diagnosing or treating diseases or disorders associated with biological disorders or imbalances. The proteins and polynucleotides are useful in cosmetic and mutriceutical applications, for identifying protein coding sequences and mapping a multique gene to a particular chromosome. The sequence of the polynucleotides and proteins can also be used as additional DNA markers for restriction fragment length polymorphism analysis, or in forensic biology. The present sequence represents a NHP kinase encoding DNA

                                                                                                   The present invention relates to novel human secretory or membrane proteins (ADAS-4072-ADAS-5710) and their coding sequences (ADAS-2433-ADAS-4071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         434
                                                                                                                                                                                                                                                                                   The invention relates to novel human kinases and phosphatases (KPP) polypeptides and polynucleotides. Polypeptides of the invention are used for screening agonists and antagonists. They are used to make monoclonal or polyclonal or antibodies, which are used in diagnostic tests for conditions or diseases associated with expression of the polypeptide. They are also useful for diagnosting or treating diseases or conditions associated with decreased expression or overexpression of functional KPP e.g. cardiovascular or neurological disorders or cancer. The invention is useful in gene therapy. The present sequence is human KPP cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  314
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

New isolated NOVX polypeptides and nucleic acid molecules useful for treating, preventing and diagnosing pathological conditions with NOVX-associated disorders, such as cancer, obesity, diabetes and inflammatory diseases. CNS

20; SEQ ID NO 129; 772pp; English. Claim

The invention relates to novel isolated polypeptides, mature form of the polypeptide, a sequence that is 95% identical to the polypeptide or the polypeptide comprisaing one or more conservative substitutions. The NOVX polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and inflammatory disorders. They can also be used in endocrine, and detection and screening assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to the coding sequence for one of the polypeptides of the invention.

The invention discloses a polymucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel cor its partial peptide, an antibody binding to the polympetide or risp partial peptide, an antibody binding to the polympetide or peptide of the polymucleotide, immunologically assaying the polympetide or peptide of the polymucleotide by contacting the polympetide or peptide or the antibody of the encoded protein, and observing the binding with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polymucleotide in an observing the polymucleotide in an observing the polymucleotide in an observing the polymucleotide in an observing the polymucleotide in the correction as primer for synthesising the polymucleotide or as a probe of proteins are useful as pharmaceutical agents and many disease-related proteins for regulation of their expression and atlayostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell cranscribtion-related proteins, signal transduction-related proteins, corrected proteins, and genes concoing them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding the polymore presented is a cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                348
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         402

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               420
                                                                                                             The invention relates to novel isolated polypeptides, mature form of the polypeptide, a sequence that is 95% identical to the polypeptide or the polypeptide comprising one or more conservative substitutions. The NOVX polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to the coding sequence for one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

cc kinase proteins and polynucleotides encoding such proteins. The human ATPRASE-like molecules are useful for modulating ATPRASE function. They are useful in modulating organelle biogenesis, cell-cycle regulation, protein degradation and vesicle-mediated transport. They are also useful for treating disorders associated with aberrant ATPRASE-like expression or activity such as splenomegaly, pulmonary embolism, atrests and primary constitution to biosphatidylserine synthase-like modulating the biosphatidylserine synthase-like molecules are useful for treating disorders associated with aberrant human phosphatidylserine (FS). They human phosphatidylserine constructs and Hodgkin disease. The human 5698, DNA fragmentation factorastrocytes and Hodgkin disease. The human 5698, DNA fragmentation factoring matrocytes are useful for modulating appototic events, including DNA fragmentation. The human 5698 molecules are useful for modulating apportor events, including DNA fragmentation. The human 5698 molecules are useful for treating diseases condulating immune, haematopoietic and blood clotting systems. They are useful for treating diseases and cancer. The modulating immune, haematopoietic and blood clotting systems. They are to spatial for treating a disorder associated with aberrant human construction and phospholipid scramblase-like modulating cellular growth and/or cellular metabolic pathways. They are conseful for treating hypertension, atherosclerosis and oligodendrocytes. The present sequence is human 27802, adenylate kinase connective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               999

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders. Claim 1; SEQ ID NO 257; 880pp; English. Ruben SM (HUMA-) HUMAN GENOME SCI INC Rosen CA, Barash SC, WPI; 2001-465460/50. P-PSDB; AAU17305. 

The invention relates to novel isolated polypeptides (I), and polymucleotides (II). (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune cc disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. thematoid arbitritis), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (c.g. thepatitis C), bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anemia), myeloproliferative disorders (e.g. disorders, primary haematopoietic disorders, hyperproliferative disorders (c.g. daucher, s disease, Parkinson's disease), chromosomal abnormalities (bown syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g. communionephritis), cardiovascular disorders (e.g. arrhythmia), cepithelial cell proliferation, endocrine disorders (e.g. Addison's disease), reproductive system disorders, gastrointestinal disorders (inflammatory disorders), liver disorders (cirrhosis), as stimulators of cirrhosis), as fimulators of higher affinity antibodies, and as a means to induce tumour proliferation higher affinity antibodies, and as a means to induce tumour proliferation hathologies e.g. acquired immune deficiency syndrome (ADS). AAS28976-CS sequences and PCR primers of the invention

```
pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the polypeptide, which involves contacting the polypeptide which involves contacting the polypeptide or the polypeptide. The polypeptide or the nucleic acid encoding the polypeptide. The polypeptide or the nucleic acid encoding the polypeptide is useful for preventing, or ameliorating a medical condition, which involves administering the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid subjectivition or a susceptibility to a pathological condition or a subject, which involves determining the presence or absence of a mutation in The nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility antibody are useful as immunosuppressive agents, the nucleic acid and the antibody are useful as immunosuppressive agents or specification but was obtained in electronic format direct from useful direct from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seqdata.uspto.gov/sequence.html?DocID=20020168711.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human kinase PKIN proteins and their

corresponding CDNAs. A composition containing PKIN agonist is useful for

treating a disease or condition associated with decreased expression of

EXIN and a composition comprising PKIN antegonist is useful for treating

a disease or condition associated with overexpression of PKIN. The

disorders include cancer (leukaemia, adenocarcinoma, lymphoma melanoma,

myeloma, sarcoma, teratocarcinoma, Hodgkin's disease); immune disorder

(Acquired immune Deficiency Syndrome (AIDS), asthma, Addison's disease,

attorimmune thyroiditis, gout, bronchitis, cohn's disease, diabetes

autorimmune thyroiditis, gout, bronchitis, Crohn's disease, diabetes

mellitus, multiple sclerosis, good pasture's syndrome, graves disease,

stendarchitis, sosteoporosis, pancreatitis, psoriasis, Reiter's syndrome,

rheumatoid archritis, Sjogen's syndrome, uveitis, ulcerative colitis,

pacterial, parasitic, fungal, viral, proticosal and helminthic infections,

rheumatoid archritis, slogen's syndrome, uveitis, ulcerative colitis,

parasitis, syndrome, hypothyroidism, cerebral palsy, cataracts; cardio syscular disease (arteriovenous fistula, hyportension, vasculitis,

cushing's syndrome, hypothyroidism, cerebral palsy, cataracts; cardio syscular disease (arteriovenous fistula, hyportension, vasculitis,

ischeemic heart disease, chronic bronchitis, lung tumours); lipid

disorder (fatty liver, Fabry's disease, Niemann-bick's disease,

hypotholesterolaemia, obesity). PKIN DNA is useful for assessing toxicity

print and compound and in gene therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as cancer, comprise human kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AGAGCTGGAGACGGCTCAGAAACTGCTGGAGTATCATAGGAACATCGTCAGGGTCATTCC 692

                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, " encoded polypeptides (AAM38642-AAM42213) with nootropic, " immunosuppressant and cytostatic acitvity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as lazheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activin/inhibin activity, chemotextic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.                                         요
                                                                                                                                             The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAAI8642-AAA4213) with noctropic.

CC immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous contains and central nervous system disease, such as learned neuropathies and central nervous system disease, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, and thrombolytic activity, chemotextic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and construction of the sequence data for this patent did not form the part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                   220 GCAATGTGGCTCTGCAAACATCTGAACAGCAGTCTCCTCACCCTGGAGAACCTGATCTTA 279
                                                                                                                                                                                                                                                                                                                                                                                                                                    Wang D;

(HYSE-) HYSEQ INC.

```
The invention relates to polynuclectides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polyment of peptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haemacopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111
(AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1036 ATCCAGAAAGGCTGGGTGCTACACGGCGTCCCGGGGACCTCGACCAGGCACACCTGCTG

Isogai,T., Otsuki,T. and Sugiyama,T. blinetect Submission

Direct Submission

Direct Submission

Submitted (24-0CT-2001) Takao Isogai, Helix Research Institute,
Genomics Laboratory; 1532-3 Yana, Kisaxazu, Chiba 292-0812, Japan
(E-mail:genomics@hir.co.jp, Tel:81-438-52-395, Fax:81-438-52-3986)

NEDO human cDNA sequencing project supported by Ministry of Economy, Trade and Industry of Japan; CDNA full insert sequencing:
Research Association for Biotechnology (RAB); DNA library
construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5- & 3'-end one pass sequencing: RAB,
HRI, and Biotechnology Center', National Institute of Technology and
Rvaluation; clone selection for full insert sequencing: RAB and

Consortium/LLNL at: http://image.llnl.gov
Series: IRAK Plate: 142 Row: e Column: 22
This clone was selected for full length sequencing because it
passed the following selection criteria: Similarity but not
identity to protein.

Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Direct Submission
